Mid-Year Progress

Mid-Year Progress Report

Upgrade the following computer labs KRV14, LRC709, LRC 710, LRC631, and renewable energy lab

This goal has been completed. Over the summer of 2015 the above listed computer labs were replaced with new dell 7020's, therefore completing this goal.

Replace the Media Carts in the East Wing and MB256

During the year this project changed directions and it was decided to replace media carts in the east wing classroom with fixed podiums and short throw projectors. This is being done in conjunction with the facilities east wing renovation project. IT completed the media upgrade in room EW202 in March and hope to have EW 205 done mid April, with the other two to be completed after the facility project work.

Continue to upgrade the campus network infrastructure and replacement of the battery backup systems in each MDF and IDF at all sites.

The two campus core switches have been ordered and delivered, IT is currently working to get these configured and installed, and they will be installed during the next scheduled maintenance cycle. Battery backup quotes are being developed and we will have the units ordered and here by mid May.
